PROFILE

Software Engineer specializing in Full Stack and Integration Development, with strong expertise in backend engineering, API design, and enterprise system integration. Experienced in building scalable, high-performance applications using Java (Spring Boot), SnapLogic, and Newgen, with solid database experience across MySQL, PostgreSQL, and Oracle. Proficient in designing and optimizing RESTful APIs, implementing efficient data models, and developing robust backend services that support complex business workflows, while also developing responsive frontend applications using React and modern web technologies (HTML, CSS), with additional experience in mobile development using Android Studio. I have delivered enterprise solutions including Chamify (https://chamify.africa) and NdovuPay (https://ndovupay.org), leveraging Java 17 and Spring Boot to build secure, scalable backend systems and integrations. I bring a strong foundation in object-oriented programming (Java, C++), data structures, and system design, along with experience in VB.NET for automated document generation and enterprise platforms such as Newgen for process automation, reporting, and rule management, and SnapLogic for API integration and data orchestration.

EDUCATION

2020 - 2024	**Bachelor of Business Information Technology** Majoring in Information Technology (Second Class Honors – Upper Division) **KCA University**
2016 – 2019	Kenya Certificate of Secondary Education (K.C.S.E) **St Mary's Boys Secondary School – Nyeri**

PERSONAL ATTRIBUTES

- **Communication Skills:** I have the ability to convey information in a clear, concise, and logical manner, communicate persuasively, and be able to advocate for a position or a cause.
- **Organization and Coordination Skills:** I have the ability to manage and coordinate with fellow team members and other special audits and ensure key steps over the entire cycle.
- **Management Skills:** Effectively manage the workflow of individual cases assigned and work towards timely resolution and closure.
- **Team working Skills:** I am experienced in monitoring, supporting, and coordinating the work on systems to ensure outputs meet quality standards and are delivered according to established schedules.

WORK EXPERIENCE I

March 2025 - Present **Cybernaptics Ltd**

As a Full Stack Developer, I participate in end-to-end software development activities to support the creation, integration, and maintenance of enterprise applications.

Key Achievements

- Successfully designed and implemented end-to-end system integrations between SnapLogic, Newgen, and relational databases, improving data flow reliability and reducing manual processing across business workflows.
- Delivered multiple RESTful API integrations enabling secure and efficient communication between internal systems and third-party platforms.
- Developed and optimized database stored procedures, resulting in improved query performance, data consistency, and faster backend processing.
- Contributed to the delivery of scalable full-stack applications by integrating React-based user interfaces with robust backend services.
- Automated complex business processes and workflows using Newgen Process Designer, reducing operational effort and turnaround time.
- Built configurable rule-based logic using Newgen Rule Builder, enabling business users to manage and adapt operational rules without code changes.
- Designed and deployed enterprise data models using Newgen Data Model Designer, supporting long-term maintainability and system scalability.
- Developed automated document generation solutions using VB.NET, improving accuracy and consistency of business reports and documents.
- Created custom operational and management reports using Newgen Report Designer, providing stakeholders with actionable insights and improved visibility.
- Supported successful production deployments and post-release stability through effective collaboration with cross-functional teams and timely issue resolution.

Responsibilities

As part of my role at Cybernaptics, I worked in a consulting capacity for SWAN Insurance, contributing to the design, development, and integration of enterprise software solutions with the following responsibilities:

Backend & Integration Development

- Design, develop, and maintain enterprise-grade backend solutions using SnapLogic for API development, system integration, and data orchestration across multiple platforms.
- Develop and integrate RESTful APIs to enable seamless communication between applications, databases, and third-party systems.
- Build, optimize, and manage database-driven backend logic through the development of stored procedures, ensuring data integrity, performance, and scalability.
- Demonstrate strong proficiency in MySQL and relational database management, including schema design, data modelling, query optimization, and transactional processing.
- Ensure seamless integration between Newgen, SnapLogic, and database systems, supporting high availability, maintainability, and system scalability.
- Design, manage, and deploy business rules using Newgen Rule Builder to control and govern enterprise business operations.
- Model, visualize, and deploy enterprise data structures using Newgen Data Model Designer, supporting system integration and data governance.

Address: Ebene, Mauritius | Email: alvinrinye@gmail.com | Mobile: +230 5519 0781

- Implement document generation solutions using VB.NET, supporting automated reporting and business document workflows.

Frontend & Application Development

- Contribute to frontend development using React, implementing responsive, user-friendly interfaces and integrating frontend components with backend services.
- Develop end-to-end enterprise applications using Newgen Interface Designer, enabling rapid application development with minimal coding.
- Design and automate user-facing workflows using Newgen Process Designer, supporting complete business process lifecycle management.
- Create and customize operational and management reports using Newgen Report Designer, ensuring accurate data visualization and business insights.

Collaboration & Delivery

- Collaborate with cross-functional teams to gather requirements, implement technical solutions, and support production environments.
- Participate in end-to-end software development activities, including analysis, development, testing, deployment, and maintenance.

WORK EXPERIENCE II

April 2024 - February 2025 **Smart People Africa**

As a Software Engineer, I design, develop, and maintain scalable backend systems and modern web applications, with a strong focus on performance, security, and system integration.

Key Achievements:

- Engineered robust backend services using Java 17 and Spring Boot, enabling scalable and high-performance application architectures.
- Designed and implemented RESTful APIs to support seamless communication between frontend systems, microservices, and third-party platforms.
- Contributed to the development of production-grade platforms including **Chamify** (https://chamify.africa) and **NdovuPay** (https://ndovupay.org), leveraging Spring Boot to build secure, efficient, and maintainable backend services.
- Optimized database performance through advanced query tuning, indexing strategies, and efficient schema design in PostgreSQL.
- Improved system reliability and reduced latency through backend performance tuning and efficient resource management.
- Implemented secure authentication and authorization mechanisms, ensuring data protection and compliance with best practices.

Responsibilities include:

Backend Development (Java 17 / Spring Boot 4):

- Developed and maintained modular, scalable backend services using Spring Boot, following clean architecture and SOLID principles.
- Built and documented RESTful APIs with proper versioning, validation, and exception handling.
- Integrated third-party services and external APIs for extended system functionality.
- Designed and optimized relational database schemas in PostgreSQL, including indexing and normalization strategies.
- Wrote complex SQL queries, stored procedures, and handled database migrations using version control tools.
- Implemented security layers including JWT authentication, encryption, and role-based access control (RBAC).
- Configured and managed application deployment pipelines and environments.
- Performed profiling, debugging, and performance tuning of backend services and database operations.

Frontend Development (Vue 3):

- Developed dynamic and responsive user interfaces using **Vue 3**, ensuring high usability and performance.
- Implemented component-based architecture with **Vue Router** and **Vuex** for scalable state management.
- Integrated frontend applications with backend APIs, handling asynchronous data flows and error states.
- Implemented client-side caching and optimized rendering for improved user experience.
- Conducted unit and integration testing to ensure UI reliability and maintainability.

WORK EXPERIENCE III

May - August 2023 **Nyandarua County Government – Ol Kalou**

As an ICT Intern performing a full range of basic administrative and procedural activities in support of ICT team to ensure effective services provided to citizens. Accountable for supporting the supervisor on routine ICT activities and programming of the server, network and operating systems.

Key achievements:

- Identified cost-effective data management technologies to implement the designed data management infrastructure.
- Worked individually as well as collaborating with vendors, system admins to implement, test and deploy the designed data management technologies.
- Continuously documented the emerging data management requirements and worked to incorporate it into the system setup.
- Continuously reviewed and optimized the implemented technologies to achieve the desired objectives and outcomes.
- Worked with end-users, data management team, and systems administrators to maintain databases.
- Developed and maintained database documentation, including data standards, procedures, and definitions for data elements and tables.
- Identified and implemented database requirements for new or existing applications by working collaboratively with other teams.
- Optimized database performance and efficiency by evaluating and recommending new database technologies.
- Supported users and developers by resolving data-related technical issues and trouble-shooting queries by guiding them with best practices.
- Executed regular database maintenance tasks, including database defragmentation, backups, and database replication.

Responsibilities included:

- Formatting and installing software and operating systems and Activation of various programs such as Microsoft Office application program (Office 2010, 2013, 2016, 2021).
- Installation of outlook and its configurations to ensure seamless communication within the County.
- Upgrading computers for example replacing CMOS battery and adding RAM and setting up computers, servers and wire networks that included crimping Ethernet cables using RJ45 and CAT 6 twisted cables.
- Maintaining and replacing faulty peripherals for instance keyboard, mouse, monitors, UPS and their batteries etc.
- Establishing networks and configuring Ethernet cables connections using cable tester, identifying problems in the network for example loose cables; troubleshooting the problems of network cables, resolving user login conflicts, IP address conflict and configuring proxy settings.
- Replacing toners on various types of printers.
- Providing support to users who have problems in network connections, helping users with problems in receiving emails, downloading and printing email attachment files, helping users with printer connection problems, helping users to troubleshoot slow PC's.
- Monitoring the proxy server to ensure every user has access to the network.

Alvin N. Rinye

Address: Ebene, Mauritius | Email: alvinrinye@gmail.com | Mobile: +230 5519 0781

- Conducting regular audits to ensure compliance with internal policies and procedures, relevant security standards best practices, regulations and client requirements to identify gaps and provide remediation solutions.
- Ensuring controls are configured correctly and integrated into the security strategy.
- Providing guidance and support to internal stakeholders regarding security & compliance practices.
- Participating in the creation and or maintenance of the Information Security Management System.
- Maintaining an up-to-date knowledge on Security standards, best practices and trends to ensure ongoing compliance
- Collaborating with IT operations, Legal, Security, and Engineering teams to define and implement policies and procedures.
- Collaborating with various teams to ensure security standards are met across all projects
- Assessing vulnerabilities/risks that could affect the integrity, availability, or confidentiality of data, systems, or services of the company and provide mitigation solutions

WORK EXPERIENCE IV

January – September 2020 Pope Benedict XVI Hospital - Nyahururu

Served in various roles at the hospital including record management, customer service while dealing with patients, billing and keeping stock of drugs at the hospital.

Key achievements:

- Served in the records management department for the hospital's insurances whereby I input and confirm claim records.
- Registered and edited patients' records to be seen by medics.
- Managed and issued stock and emergency drugs, Filed out insurance claims for the hospital and also a cashier after a promotion to the night shift department.
- Co-ordinated activities when emergencies were there, for example calling and informing medics on call on arising situations.
- Demonstrated trustworthiness, time management and organizational skills by maintaining a good employee record, and meeting deadlines when delivering claims.

Responsibilities included:

- Supporting budget planning and implementation ensuring that financial resources are planned for and utilized to implement activities in accordance with the hospitals budget and allotments issued and reallocates resources as necessary in coordination with priorities stated.
- Ensuring coordination with the hospital heads and the Administrative Office team, an appropriate distribution of tasks across the Administrative and Finance Team to guarantee smooth functioning and an effective support of the hospital's operations.
- Supporting the supervisor on daily routine network maintenance activities.
- Providing first-level help-desk support to patients.
- Providing support in conferencing with ICT and audiovisual equipment as and when requested.
- Maintaining and updating files (electronic and paper) and internal databases.
- Working closely with administrative unit on maintaining ICT equipment inventory, also ICT unit inventory including documentation. This may require the incumbent to lift, move, mount, or store equipment.
- Assisting in preparing report or extracting data as needed or per requests of users, also help diagnosing errors and preliminary address the issue as necessary.
